Troubleshooting

- I cannot pair the keyboard with my device.

Answer: Make sure that the device you want to pair with has Bluetooth.
Restart the device and try to pair with the keyboard again.
Note: On Windows, new Bluetooth connections sometimes require additional software updates, after a message indicating successful completion, the process may still be in progress and wait at least 20 minutes after pairing, just to ensure that all updates are completed before restarting the computer.
Confirm that the device configuration accepts Bluetooth connections (Windows) and supports external keyboards (HID profile)
Go to Bluetooth device>Settings, and then select the following boxes:
Allow Bluetooth devices to find this computer
Allow Bluetooth devices to connect to this computer
Remind me when the Bluetooth device wants to connect

- My keyboard cannot be used.

Answer: Restart the keyboard. Turn off Bluetooth and restart the computer. (Windows About device: Go to Bluetooth settings, turn off Bluetooth and forget the keyboard. Restart the device, and turn on Bluetooth to reconnect.

- Wireless connection interfered within 10 meters.

Answer: Check whether the keyboard is placed on a metal surface that may interfere with Bluetooth signals or around devices in the same channel (such as routers, etc.)

- Third-party input tools are not compatible with the keyboard.

Answer: Due to the compatibility, version, brand and driver of the Windows/Android system, third-party input tools may be affected when using the keyboard. Please make sure your operating system and driver are up to date.

- Some FN keys or multimedia keys do not work in Windows/Android mode.

Answer: Due to Windows/Android system compatibility, version, brand and driver, some multimedia key functions may not be used.
